

CookerUp

## OUR VISION

My vision is to create an easy to use, clean, functional, one stop recipe website.

## Why ?

I really enjoy cooking. When trying to make a delicious dinner the last thing I want is adds galore, a slow website, and something that requires a lot of time to navigate.

## How ?

Putting the user first is our goal. By prioritizing speed and functionality over monetization, we are putting the user first.

## Who ?

My Name Is Benji Gansekoele. I am a computer programming student at Conestoga College.

## Technology

I used Nodejs and Mysql on this project.

## Future ?

I would like to continue working on this project and make it live. There are many things to add but I think if I stick with my vision I can make it come to life.
